

# ***Strong Foundations*** ***for the Future of Clean Energy***

L&L Concrete Inc. has the experience and resources to build the strongest foundations for wind and solar farms —  
coast-to-coast or worldwide.

# L&L Concrete: a one-stop shop

## Experienced & Established Contractor

L&L Concrete Inc. is an experienced and established concrete construction contractor based in Raleigh, NC.

## Founded in 1995

In business since 1995, we are a proud member of the L&L Construction Group family of companies. This affords us several advantages:

### Site Preparation

We can provide the site preparation, even before construction begins. This includes any excavation that may be required, installation of stormwater management utilities, or demolition of existing structures or obstructions.

### On-Site Concrete Production

We can set up a portable concrete plant on-site. This not only gives us 100% quality control over the concrete mix and design. It also reduces material costs, transportation expenses and eliminates problems with delivery times.

### Experienced Field Management

Estimator and Project Manager for our Industrial/Commercial Division, Manny Esteves, is experienced at managing large-scale projects. Dams & Spillways, Heavy Foundations, Wastewater Plants, Pump Stations and more are all part of his extensive experience.

Know that your project is in good hands.
